

ISO 27001 Fundamentals

a Cyber-Sheriff training course from

“Be in control”

We live in challenging times!

Organizations face increasing cyber-security threats, ever-changing regulatory requirements, plus increasing risk of financial losses, business interruptions and reputational damage. Being in control of your information security is an absolute necessity, if your business is to survive and thrive. The ISO 27001 international standard is the widest-known and applied standard for info sec management. Compliance with the standard assures you and your stakeholders, partners and customers that you are managing your information risks properly.

COURSE OBJECTIVES

- To provide a clear overview of ISO 27001 requirements
- To introduce students to risk assessment, and risk treatment
- To brief them on the planning, implementation, & continuous improvement of an effective, information security management system (ISMS)

WHO SHOULD ATTEND

- Information Security Officers
- Information Risk Managers & Analysts
- Info Sec & Regulatory Compliance Professionals

COURSE BENEFITS

- Understand & appreciate the importance of information security & regulatory compliance
- Gain an understanding of what is required to help organizations to be compliant with the standard
- Benefit from hints, tips, templates and practical guidance to kick-start their journey to building a compliant ISMS.
- **Malaysia HRDF-claimable.**
